

SHAREPOINT LIST SYNCHRONIZER FOR EXCEL

is a tool created by SoftFluent to automatically restore the two-way synchronization feature when exporting SharePoint lists to Microsoft Excel.

In Microsoft Office Excel 2003, you could read from and write to lists that reside on SharePoint sites. This feature is **disabled** by default in Microsoft Excel version 2007 and 2010.

The SharePoint List Synchronizer for Excel addresses this issue and allows Excel users to **transparently** open SharePoint Lists in two-way sync mode.

OFFER MAXIMUM PRODUCTIVITY TO YOUR MICROSOFT SHAREPOINT USERS

You can export your lists to Excel 2007 and 2010, and synchronize back to SharePoint without any extra-effort

Thanks to this product, you will be able to:

- read/write changes in a list using SharePoint List,
- update lists offline without using Access,
- keep your existing two-way SharePoint lists you created in earlier versions,
- deploy the component across your enterprise using a .MSI setup program.

TEST IT BY YOURSELF IN 5 MINUTES!

1. Go to <http://www.softfluent.com/xlsync> web page
2. Download and launch the .MSI installer
3. Use the temporary test key from this page
4. Check applicability to your context by opening your existing SharePoint lists
